For the Most Challenging Dirty Water Conditions in Irrigation
Yardney pioneered the use of sand media filtration in 1965 and through advancing technology, continues to provide high performance and long-term value in the field. Yardney Sand Media filters are manufactured in the USA to the most exacting standards.

### Applications
- Removal of algae, slime or other organic contaminant as well as sand, rock, grit and other inorganic contaminants
- Protects drip and micro-irrigation systems from plugging with fine filtration removal down to 200 mesh or 75 microns

### Advantages
- ASME code shaped head construction for durability and safety
- Standard products material thickness:
  - Carbon steel: 3/16"
  - Stainless steel: 10 gauge
- Standard operating pressure of 80 psi (high pressure systems available)
- Backwash automatically or manually initiated
- Easy-entry lid closure with weld tabs for operator safety
- Exterior of tank on carbon steel product is powder coated with UV stabilized polyester powder coat for longer product life and greater protection from the environment
- Removable stainless steel wedgewire underdrain
  - Ensures structural integrity in the harshest conditions
  - Hydraulically balanced to increase effectiveness of backwash while reducing flush frequency and waste of water
  - High strength stainless steel wedgewire will withstand a collapse pressure in excess of 600 psi
- Drain Ports:
  - 14", 18", 24" and 30" tanks: 3" drain port
  - 36" and 48" tanks: 6" drain port to allow access to the stainless steel underdrain and less time for draining of media
- Made in USA

Manway weld tabs are standard on all media tanks and screen filter housings.
Inlet and Outlet Endcap Couplings

Weld couplings accompanied with a galvanized plug are standard on the endcaps of inlet and outlet manifolds.

Optional removable underdrain

High strength stainless steel wedgewire underdrain has a collapse resistance in excess of 600 psi insuring structural integrity in the harshest conditions. Removable underdrain system feature saves both labor and time during media changes.

Automatic and Manual Valves

Our patented cast-iron backwash valve has the lowest pressure drop in the industry and is designed to be 100% field serviceable with basic hand tools. Valves feature non-corrosive stainless steel shafts, brass bushing, durable molded polyurethane seals, fusion epoxy lining, and a grease fitting for valve shaft lubrication.

Deflector

The inlet and two-stage deflector plate reduce the velocity of water entering the tank and create a more uniform distribution across the filtration media bed.
## Tank Options

### SM100
- Available in 48" carbon steel
- Epoxy composite underdrain
- Top manway cover: 10" carbon steel
- 11 x 14" elliptical side manway
- 3M Scotchkote® 134 on interior surfaces of tank
- Exterior UV stabilized powder coat on carbon steel tanks and all manway lids

### SM200
- Available in:
  - Stainless steel: 18", 24", 30", 36", 48"
- One 3" drain port on 14", 18", 24" and 30" tanks
- One 6" drain port on 36" and 48" tanks
- Welded stainless steel wedgewire underdrain
- Top manway cover:
  - Carbon steel:
    - 3": 14", 18" tanks
    - 6": 24", 30" tanks
    - 8": 36" tanks
    - 10": 48" tanks
  - Stainless steel:
    - 3": 18" tanks
    - 6": 24" tanks
    - 8": 30", 36", 48" tanks
- Exterior UV stabilized powder coat on carbon steel tanks and all manway lids

### Ordering code part number breakdown:

<table>

*For pressure ratings above 150 PSI, please consult a Yardney representative.*
SM300
- One 6” drain port
- Threaded removable stainless steel wedgewire underdrain with Schedule 80 PVC hub
- Top manway cover: 10” carbon steel
- 11 x 14” elliptical side manway
- Exterior UV stabilized powder coat on carbon steel tanks and all manway lids
- Optional cross flow underdrain

SM350
- Available in: Carbon steel: 14”, 18”, 24”, 30”, 36”, 48”
- One 6” drain port
- Threaded removable stainless steel wedgewire underdrain with Schedule 80 PVC hub
- Top manway cover: 10” carbon steel
- 11 x 14” elliptical side manway
- Exterior UV stabilized powder coat on tanks and all manway lids
- Optional cross flow underdrain

SM400
- Available in 48” carbon steel
- Two 6” drain ports
- Threaded removable stainless steel wedgewire underdrain with Schedule 80 PVC hub
- Top manway cover: 10” carbon steel
- Exterior UV stabilized powder coat on tanks and all manway lids
- 3M Scotchkote® 134 on interior surfaces of tank
- Optional cross flow underdrain
Operation

**Filtration Process**
- The contaminated water enters the system through the inlet manifold, transitioning to the Yardney 3-way valve and into the top inlet of each tank
- The Yardney two-stage deflector creates a uniform distribution for laminar flow across the media bed while avoiding channeling of the media bed
- Particulate is trapped and retained within the media bed resulting in clean process water flowing out through the stainless steel wedgewire underdrain, to the outlet of each filter tank and to the outlet manifold for end use

**Backwash Process**
- Backwash sequence is initiated by either manual or automatic operation via the Yardney controller
- Water or air pressure opens the Yardney 3-way valve causing the reverse flow of a portion of filtered water up through the stainless steel underdrain to hydraulically and uniformly lift the media bed
- The use of a hydraulically balanced underdrain in conjunction with a gravel pack creates a proper and uniform lift of the media bed while avoiding a turbulent backwash
- Entrapped particulates are released during the backwash event, exhausted up through the backwash manifold and routed to a convenient location
- Each vessel is backwashed one at a time while continuing to process water for use until the entire system is clean
- Once completed with the backwash, filtration continues until the next backwash event is called for
Yardney offers high strength, corrosion resistant stainless steel material as an option on most Sand Media systems.
